## ▌ What is a Security Audit?

Businesses of all sizes, and in all sectors, can take advantage of K3's no-obligation security audit. Our audit is a consultative review service that highlights potential system security risks with the provision of a risk score, comprehensive report and expert recommendations.

Consider it as a security health snapshot which allows you to gain visibility of the blind spots and weaknesses that are making you vulnerable, giving you the knowledge to invest in remedial and preventative action.

The security audit analyses your network and identifies vulnerabilities from both external and internal attacks, plus current security, accessibility and major issues. If applicable, we will also advise on how to lock down your data and get more out of your current IT infrastructure.

To ensure your business remains vigilant, aware and prepared for evolving cybersecurity threats, we can also undertake quarterly audits which build on our prior findings.

## ▌ Our process

- **Analyse** –Your internal and external networks are comprehensively analysed

- **Review** – All the details of your security audit report are meticulously reviewed

- **Document** – Our findings are documented and provided

- **Present** – You discover the results of our audit in straightforward language

- **Advise** – We advise on remedial action and make helpful recommendations

## ▌ What you recieve

- An overview of your network(s) devices, including a general health and security review

- A risk score, calibrated from the nearly 20 reports that make up our audit

- Analysis and recommendations of each issue encountered

- A thorough collaborative review, so you can make the most out of the audit
